## WALL-MOUNT 2-POST OPEN FRAME RACK

### Wall-Mount 2-Post Open Frame Rack

Expandable Rack Assembles in 8U, 12U or 22U For Equipment Up to 23.5 inch Deep

Wall-Mount 2-Post Open Frame Rack is ideal for storing UPS systems, battery packs, power cords, network switches, patch panels and related cabling in secure IT areas with limited floor space. It's compatible with EIA-standard 19-inch equipment that supports two-post mounting and a maximum mounting depth of 23.5 inches.

#### Expands to Add Equipment Later Without Buying a Bigger Rack

The expandable design allows you to assemble this in an 8U, 12U or 22U configuration to meet your current needs, while leaving rack space in reserve for future expansion. Mounted to the wall or resting on the floor, it saves precious space and allows IT managers easy access for organizing, installing and servicing equipment and cabling.

Constructed from heavy-duty steel with a durable black powder-coated finish, this has a maximum load capacity of 150 pounds. The vertical mounting rails have threaded 12-24 holes. Equipment mounting screws are included. Wall-mounting holes are spaced 16 inches apart to accommodate standard wall stud placement.
